Skylark Holdings Co., Ltd.

Endorsement of Japan Climate Initiative's (JCI) Policy Proposal Calling for an Accelerated Transition to Renewable Energy

Skylark Holdings Co., Ltd. has endorsed the policy proposal released by the Japan Climate Initiative (JCI), titled "Overcoming excessive reliance on imported fossil fuels as early as possible and realizing energy security and a decarbonized economy through a transition to renewable energy." A total of 252 organizations across Japan, including companies, local governments, and various associations, have endorsed this proposal.

Amid ongoing global instability and fluctuating energy prices, Japan faces significant energy security risks stemming from its excessive dependence on imported fossil fuels. At the same time, the impacts of the climate crisis are becoming increasingly severe, requiring an acceleration of decarbonization efforts.

To strengthen Japan's energy security and achieve a decarbonized economy, this proposal focuses on four key pillars: "Achieving energy independence," "Accelerating decarbonization through electrification," "Building a resilient society through decentralized energy systems," and "Enhancing competitiveness by promoting investment in the transition to renewable energy."

Through our endorsement of this proposal, Skylark Group will continue to drive initiatives toward transitioning to renewable energy and realizing a decarbonized society.
